We made sure that the flask code works on port 5000, and that it shows the login page when you first enter it. We made sure that you had to have valid login credentials in order to use the portal. We made the grades viewable only if you are a participant of the class, regardless if you're a student or a teacher. We created an option for the student to give feedback to the teacher for the specific classes he/she is in. We also created an option for the student to request for a remark for every specific mark they had and give a reason as to why they deserve one. We created the option for the professor to change the mark for students who requested for a remark. We also let the instructor see the reason for the remark requests and the feedbacks from students that the instructor teaches. We also made the feedback that students give anonymous.

Mogen created the HTML for the login page, instructor portal and student portal. Mogen completed the flask file by himself. He made the CSS for the login page. Kelson created the CSS for the instructor portal and student portal. Kelson also made all the SQL queries and created the database. Mogen completed 65% of the work while Kelson completed 35%
